Full Work Rights · No Sponsorship Required

Auckland-based applied AI engineer and PhD candidate who ships **production AI systems** across media and public-sector digital forensics. Four years at **TOHU MEDIA** delivering computer-vision pipelines, plus an AUT Research Assistant project for Tonga Police: an offline LLM system for Autopsy forensic-report analysis and risk assessment. Hands-on across Python, PyTorch, Docker, local/cloud inference, end-user workflows and privacy-sensitive deployment. Two first-author Q1 journal papers, seven peer-reviewed papers and 70+ citations.

PRODUCTION AI
4 production systems across media and digital forensics.

ENGINEERING
Python, PyTorch, Docker, local LLMs and cloud GPUs.

RESEARCH DEPTH
2 Q1 first-author papers, PhD, 7 papers, 70+ citations.

NZ READY
Auckland-based, local industry experience, full work rights.

CORE EXPERIENCE

Artificial Intelligence Developer — Feb 2022 - May 2026

TOHU MEDIA, Auckland - full-time June 2025 to May 2026; part-time alongside master's and PhD study before that

- **Own the company's AI capability end-to-end**: dataset scope, PyTorch training/evaluation, Docker-packaged inference and deployment to company cloud GPU servers.
- Designed and shipped **three production AI systems** - object detection, OCR and action recognition - replacing manual transcription work on client video footage (specific deliverables under NDA).
- Engineered for messy real footage: variable cinematography, dense overlay text, low-contrast archives, long-form takes and workloads beyond single-workstation GPU limits.
- Worked directly with editors and the creative director on architecture, useful outputs and latency/accuracy trade-offs while preserving client data sovereignty.

Research Assistant - LLM Digital Forensics — Oct 2025 - Feb 2026

Auckland University of Technology · Client: Tonga Police

- Built and delivered **Autopsy AI**, a Windows application that parses Autopsy HTML case reports, combines rule-based risk scoring with LLM analysis, and generates investigator-ready reports.
- Designed a **100% offline local-LLM deployment** with Ollama/Gemma, Tonga-specific risk keywords and a standalone executable to keep sensitive forensic data on-device.

PhD Researcher - Computer Vision & Human Activity Recognition — Oct 2023 - Oct 2026 expected

Institute of Robotics & Vision, Auckland University of Technology

- Designed FATL-GCN for skeleton-based human activity recognition; published in **Pattern Recognition** (Q1, IF 7.6) in 2026.
- First-authored a generalisation survey in **Computer Science Review** (Q1 review, IF 17.5, 2026) and a model paper at ICONIP 2024; owned model design, GPU experiments, writing and rebuttal.

TECHNICAL CORE

Programming & ML
Python, Java, PyTorch, TensorFlow/Keras, scikit-learn, NumPy, pandas, Hugging Face

Computer Vision
YOLO family, object detection/tracking, OCR, video analytics, action recognition, segmentation, classification

Deployment
Docker, containerised inference, Linux, Git/GitHub, CUDA, cloud GPU servers, model evaluation

Research methods
GCNs, CNNs, attention/Transformers, skeleton-based HAR, frequency-domain learning

LLM Systems
Ollama/Gemma, Claude/OpenAI APIs, multi-provider integration, offline inference, prompt engineering

DOMAIN FIT

Enterprise AI · Computer Vision · OCR / Document AI · Video Analytics · Digital Forensics · Public-Sector AI · Agritech · Healthcare AI · Insurance Claims AI · Transport / Safety · Applied Research

ADDITIONAL EXPERIENCE

Research Assistant - Computer Vision — Nov 2022 - Jul 2023
School of Engineering, Computer & Mathematical Sciences, AUT

- Co-built KiwiDetector (improved YOLOv7) and KiwiTracker for real-time orchard video; lead paper has 50+ citations.
- Co-authored three peer-reviewed papers across IVCNZ 2022, SAI Intelligent Systems 2023 and PSIVT 2023.

Teaching Assistant — Mar 2025 - present
Auckland University of Technology

- TA on undergraduate computer-science courses including programming, AI and computer vision; deliver classes and tutorials, prepare teaching materials and mark assessment.

Tech Service — Apr - Dec 2023
PB Tech, Auckland

- Handled hardware diagnostics, software troubleshooting, customer returns and custom PC builds; strengthened plain-English technical communication with non-specialist users.

Junior Lecturer / Co-Founder — 2015 - 2021
Baiyin Vocational & Technology College / Baiyin Pinuo Training School, China

- Taught Computer Fundamentals, Java, IoT applications and RFID technologies to about 120 students per year for four academic years.
- Co-founded a private training school; built curriculum, ran academic operations and finance, then divested before relocating to New Zealand.

EDUCATION

PhD, Computer & Information Sciences
Auckland University of Technology
Oct 2023 - Oct 2026 expected. AUT PhD Full Scholarship. Thesis: deep learning for skeleton-based human activity recognition.

Master of Computer & Information Sciences
Auckland University of Technology
2021 - 2023. Specialisation: Computer Vision.

BEng, Logistics Engineering (Software)
Dalian Neusoft University of Information
2011 - 2015.

WHY THIS FITS NZ EMPLOYERS

- **Skilled tech role fit:** AI/ML engineering, software engineering for AI systems, computer vision, data-science engineering and applied research.
- **Local context:** Auckland-based since 2021 with NZ experience across TOHU MEDIA, AUT and PB Tech.
- **Evidence of delivery:** four production AI systems, cloud GPU and offline LLM deployment, user-facing workflow integration.
- **Evidence of depth:** AUT PhD scholarship, two Q1 first-author journal papers, seven peer-reviewed publications, 70+ citations.

AWARDS & PROFESSIONAL SERVICE

- **AUT PhD Full Scholarship** - tuition + living stipend, Oct 2023 - Oct 2026.
- **SECMS Research Assistant Fund** and **AUT Summer Research Assistant Scholarship**.
- Peer reviewer for ACM TOMM, International Agrophysics and IEEE PIMRC.
- Member, AUT Institute of Robotics & Vision.

COMMUNICATION

- University teaching in China and New Zealand: four years as a lecturer in China, and seven AUT courses across Levels 5 to 8 since 2025.
- Comfortable explaining AI systems to engineers, students, editors, managers and non-specialist stakeholders.
- Bilingual: Mandarin Chinese and professional English.

REFEREES

Available on request. Doctoral supervisors at AUT and an industry referee from TOHU MEDIA can be provided.

Applied AI engineer with research depth: production computer vision, private LLM deployment, and New Zealand delivery experience.
